

DVB-T Single Frequency Network (SFN)

For the operation of digital terrestrial TV networks, DVB-T and/or DVB-H, where several transmitters broadcast the same programs on the same channel frequencies - Single Frequency Networks - the transmitters require precise time and frequency synchronization.

The UBS DVS 4010 SFN Adapter fulfils the task of inserting "synchronization marks" in a DVB transport stream (MIP insertion) in full accordance with DVB-T/H standards.
